

Worldwide Career Solution

Website Form Submissions → Telegram Bot Delivery

Document type: SOP | Audience: Lead receiver / operator / teammate
Status: **Live & working** | Version 1.0 | Date: 24 July 2026

Project status: DONE. When a visitor submits a form on the live website, the system automatically sends the submission details to the configured Telegram bot chat.

1. Purpose

This SOP explains how website form submissions are delivered to Telegram, what is already set up, and what the receiving user must do to get leads. Share this document with any teammate who needs to monitor or act on new inquiries.

End result: Visitor fills form → team receives formatted lead message in Telegram.

2. Live Links

Item	Link
Website (public)	https://worldwide-career-solution.vercel.app
GitHub repository	https://github.com/fuhadanik/worldwide-career-solution
Telegram bot	@Websitecontactforbot
API health check	https://worldwide-career-solution.vercel.app/api/submit

3. How It Works (Simple Flow)

1. Visitor fills form on website	2. Data sent to /api/submit	3. Server formats lead message	4. Telegram bot sends message	5. You receive lead in Telegram chat
----------------------------------	-----------------------------	--------------------------------	-------------------------------	--------------------------------------

Forms that send leads

1. **Quick Lead** (hero card) — name, phone, service, region, notes

2. **Full Assessment** (assessment section) — name, phone, email, education, service, country, notes

Both use the same backend: **POST /api/submit**.

4. What the Receiver Gets in Telegram

Each lead message looks similar to:

New Full Assessment (or Quick Lead)
Worldwide Career Solution

Name: ...
Phone: ...
Email: ... (if provided)
Education: ... (if provided)
Service: ...
Region / Country: ...

Notes:
...

Time: date/time (Asia/Dhaka)

5. One-Time Setup for Telegram Receiver

Telegram bots **cannot message you first**. The person who should receive leads must open the bot once.

Steps for the user who will receive leads

1. Install / open **Telegram**.
2. Open the bot: **@Websitecontactforbot** — <https://t.me/Websitecontactforbot>
3. Press **Start** or type **/start** (or any message like Hi).
4. Confirm the bot chat is open and not blocked or muted.
5. Submit a **test form** on the live website (or ask developer to send a test lead).
6. You should receive the test message in that same bot chat.

If leads go to the wrong person

A new receiver must send **/start** to the bot. Developer then updates the chat ID in the API (or Vercel env **TELEGRAM_CHAT_ID**) and redeploys. Do not share the bot token outside trusted operators.

6. Operator Checklist (Day-to-Day)

Task	Action
Receive a lead	Open Telegram → chat with @Websitecontactforbot
Reply to customer	Call or WhatsApp the phone number in the message (bot does not auto-reply to customer)
Test the pipeline	Submit the live site form with a test name/phone
Site down?	Open live URL; if broken, check Vercel / GitHub latest deploy
No Telegram message?	Confirm bot not blocked; ask developer to verify chat ID + API health

Important

The bot only **notifies your team**. It does **not** automatically message the student. Follow-up is always manual (call / WhatsApp / email).

7. Roles & Responsibilities

Role	Responsibility
Website visitor	Fills Quick Lead or Full Assessment form
Telegram receiver	Monitors bot chat; contacts leads promptly
Site owner / developer	Maintains site, bot token, chat ID, Vercel project

8. Troubleshooting

Problem	Likely cause	Fix
Form OK, no Telegram	Wrong chat ID / bot blocked	User sends /start; update chat ID & redeploy
API: chatLinked false	Nobody messaged the bot	Message @Websitecontactforbot
API 502 / Telegram error	Invalid token or bot banned	Check token with BotFather; re-add bot
Form spinner forever	Network / API error	Test /api/submit; check browser console
Leads to old phone	Chat ID still old user	Change TELEGRAM_CHAT_ID / DEMO_CHAT_ID

Health check: open <https://worldwide-career-solution.vercel.app/api/submit> — expect **configured: true** and **chatLinked: true**.

9. Acceptance Criteria (Project “Done”)

Mark complete when all of the following are true:

- ☒ Website live on Vercel
- ☒ Code on GitHub
- ☒ Forms call /api/submit
- ☒ Telegram bot receives test lead
- ☒ Receiver confirmed message in Telegram
- ☐ (Optional) Custom domain connected
- ☐ (Optional) Additional receivers / group chat configured

10. Short Version (Copy-Paste to Teammate)

Worldwide Career Solution — Lead SOP (short)

- Live website: <https://worldwide-career-solution.vercel.app>
- When a visitor submits **Quick Lead** or **Full Assessment**, we get a Telegram alert.
- Open Telegram bot: <https://t.me/Websitecontactforbot>
- First time only: press **Start** / send **Hi**.
- All new leads appear in that bot chat with name, phone, service, and notes.
- Call or WhatsApp the lead using the phone number in the message.
- If you stop receiving messages, tell the developer — chat link may need refresh.

11. Technical Summary (For Developers)

Piece	Detail
Hosting	Vercel (static HTML + serverless API)
Frontend	index.html (Tailwind CDN, Bengali UI)
Backend	api/submit.js — Node serverless function
Telegram	Bot token + chat ID (env or demo hardcode)
Optional env	TELEGRAM_BOT_TOKEN, TELEGRAM_CHAT_ID
Fallback	Quick form may open WhatsApp if Telegram fails

Document control: Version 1.0 — 24 July 2026 — Initial SOP after live Telegram delivery confirmed.
Contact for technical issues: project owner / developer who manages the GitHub + Vercel project.
